Technol STR-2+ is engineered to combat the major fuel oil problems associated in both the summer and winter seasons. These are fuel stabilization, sludge buildup, gelled fuel and ice, water contamination, algae, tank / fuel system corrosion and incomplete fuel combustion. Technol STR-2+ is the most cost effective maintenance conditioner that will keep your fuel and fuel system at their peak efficiency.

**Works in Blended Biofuel** - The same benefits are achieved in blended Biofuel up to B20 blends. The oxidation of biodiesels and biodiesel blends is known to form deposits and corrosive materials which may impact the operability performance and the effects on internal components.

The anti-oxidant in Technol STR-2+ is a proprietary blend of antioxidants and a metal deactivator used to prevent oxidation or loss of stability in biodiesel. The metal deactivator is designed to neutralize the catalytic effect of copper and other metals in promoting oxidation in biodiesels.

**Stabilizes Fuel** - Sludge is formed as fuel degrades, breaks down and builds-up, more so over the hot summer months. In time, this sludge buildup becomes so great that you don’t realize you have a sludge problem until your filters clog. Keeping your fuel stabilized throughout the year will inhibit sludge buildup from forming.

**Sludge Dispersants** break up and dissolve fuel sediment sludge small enough that most pass harmlessly though filters and injectors, cleaning the entire fuel system. This enables your fuel system to operate at its peak efficiency with an optimally atomized fuel spray, leading to an increase in fuel economy.

**Prevents Gelling** - The pour point of your fuel is lowered by up to 25°F. Cold Flow Improvers modify the wax crystals that form at temperatures below the cloud point by keeping them from forming an impervious mass of gelled fuel that blocks fuel flow. This keeps your fuel free flowing during cold climate conditions.

**Prevents Ice Formation** - Any free water within the tank, and water that the fuel has absorbed, are both kept from freezing. All ice and ice crystals are melted and prevented from refreezing.

**Emulsifies Water** - Water is not only inherent in fuel oil, but can be introduced at any point between the refinery to delivery. Technol STR-2+ enables water and fuel oil to mix, and this “emulsion” is removed from the tank as the fuel is called upon to heat your home. This keeps water contamination from building up, controlling algae and corrosion.

**Controls Algae & Bacteria** - when water is removed, the environment that Algae and Bacteria need for life and growth is also removed, keeping tanks clean and filters and lines from clogging. This keeps downtime and maintenance costs to a minimum.

**Corrosion Inhibitors** - within Technol STR-2+, and with continued use will protect your fuel system from further rust and corrosion. Corrosion occurs unseen from the inside until your tank springs a costly leak.

**Improves Fuel Combustion & Efficiency** - Combustion Improvers enable your fuel to ignite faster for a more complete fuel burn. Results are increased BTU output while using the same amount of fuel. Carbon, soot buildup, and emissions are reduced when compared to using unconditioned fuel. A clean fuel system operating at peak efficiency, with your fuel providing more BTU output, fuel economy savings may be
Features & Benefits

- Maximizes Biodiesel Storage life, inhibiting decomposition, or oxidation, and maintaining fresh Biofuel during extended storage. Cost effective when compared to other stabilization alternatives. Particularly effective in biodiesel produced from sources with residual metal content. Effective in extending Rancimat values during extended storage.
- Improves fuel combustion and efficiency.
- Stabilizes fuel and prevents sludge formation.
- Cleans the entire fuel system from tank to burner.
- Reduces filter plugging and clogging.
- Emulsifies and controls water, bacteria and algae.
- Inhibits tank and fuel system corrosion.
- Prevents fuel icing and gelling.
- Reduces fuel-related equipment downtime and maintenance costs.
Recommended seasonal application

Winter Use

- Apply proactively, pour Technol STR-2+ directly into the tank before the onset of cold weather and then refuel the tank to insure faster mixing and distribution.
- If the amount of fuel needed is not known, apply after the refueling gallons are known. Technol STR-2+ can be applied after a fuel delivery but mixing will not be as fast.
- It is best applied before refueling to insure faster mixing and distribution.

To stabilize fuel during summer storage.

When spring arrives, double dose the entire fuel tank capacity then top off the tank.

Usage ratios

Initial use apply at the ratio of 16ozs. to every 275 gallons of fuel,

or

One gallon to every 2,000 gallons of fuel.

Maintenance, apply at the ratio of 8ozs. to every 275 gallons of fuel,

or

One gallon to every 4,000 gallons of fuel.

PHYSICAL & CHEMICAL PROPERTIES

Material is: Liquid

Appearance: Amber Color

Flash point: 126°F (52.2°C)

Specific gravity@25°C (77°F): 0.91

Sludge Vs. Fuel Stabilization

Fuel starts to degrade very soon after it’s produced and sludge forms as fuel degrades. From the refineries to the oil dealer and ultimately to your tank, fuel oil is stored, aged, degrades, and causes sludge. Before you get a chance to burn the oil, it gets a chance to sit around, age and degrade causing sludge. Summer heat and stagnant storage speed up fuel degradation. This is why being proactive by stabilizing every refueling is so important in preventing sludge. Year round fuel stabilizing is key to a clean fuel system. Technol STR-2+ will stabilize your fuel while sludge detergents and dispersants breakup any sludge already within your tank. One uncontrollable factor is that you were delivered a “sludgy” load of fuel, which is an instant problem. In that case, Technol 246 Super Sludge Dispersant is recommended.

Combats water buildup and algae

If you do not top off the tank in the spring, hot summer days and cool nights cause condensation to form within the “open air space” above the fuel. As water builds up, rust and corrosion start to damage the tank from the inside out. This “free water” collects and algae is another problem that often occurs. Technol STR-2+ allows water and oil to mix. This water/oil “emulsion” is removed as the boiler calls for fuel to provide heat. It is burnt and sent up the stack as steam. When the water is gone, the environment required for biological life is also gone.

Prevent loss of stability in Biofuel

A variety of factors affect the level of decomposition of biodiesel as well as the rate of formation and decay. These factors include the temperature, presence of light, catalytic metals in the fuel system, sump oil, or storage containers, type of biodiesel, fatty acid profile, blend level, and other contaminants.

The oxidation of biodiesels and biodiesel blends is known to form deposits and corrosive materials which may impact the operability performance and the effects on internal components. The anti-oxidant in Technol STR-2+ is a proprietary blend of antioxidants and a metal deactivator used to prevent oxidation or loss of stability in biodiesel. The metal deactivator is designed to neutralize the catalytic effect of copper and other metals in promoting oxidation in biodiesels.
SECTION 1. PRODUCT AND COMPANY IDENTIFICATION

**PRODUCT FORM:** Liquid Substance

**TRADE NAME:** Technol STR-2+ Anti Oxidant for Distillate & Biodiesel Conditioner

**CHEMICAL NAME:** Proprietary mixture of petroleum distillates

**COMPANY:** Technol Fuel Conditioners, Inc.

145 Wyckoff Road
Eatontown, NJ 07724
Phone: 1.800.645.4033

**EMERGENCY PHONE:** Chemtrec: 1.800.424.9300 - within USA and Canada
Chemtrec: 1.703.527.3887 - outside USA and Canada

SECTION 2. HAZARDS IDENTIFICATION

Classification of the Substance or Mixture

**GHS Classification in Accordance with 29 CFR 1910 (OSHA HCS):**
- Physical, Flammable Liquids, 3
- Health, Specific target organ toxicity- Single exposure, 3
- Health, Acute toxicity, 3 Oral
- Health, Acute toxicity, 3 Dermal
- Health, Acute toxicity, 3 Inhalation
- Health, Skin corrosion/irritation, 1 C
- Health, Carcinogenicity, 2
- Health, Aspiration hazard, 1
- Health, Serious Eye Damage/Eye Irritation, 1
- Health, Skin sensitization, 1
- Health, Specific target organ toxicity - Repeated exposure, 2
- Environmental, Hazards to the aquatic environment—Chronic, 1

GHS Label Elements, Including Precautionary Statements

**GHS Signal Word:** DANGER

**GHS HAZARD PICTOGRAMS:**

GHS Hazardous Statements:
- H226-Flammable liquid and vapor
- H335-May cause respiratory irritation
- H336-May cause drowsiness or dizziness
- H314-Causes severe skin burns and eye damage
- H318-Causes serious eye damage
- H351-Suspected of causing cancer
- H304-May be fatal if swallowed and enters airways
- H301-Toxic if swallowed
- H311-Toxic in contact with skin
- H331-Toxic if inhaled
- H410-Very toxic to aquatic life with long lasting effects

SECTION 4. FIRST AID MEASURES

INHALATION: Overexposure can cause dizziness, lack of coordination, and breathing complications, unlikely to occur under normal usage conditions. Handlers should always wear a self-contained breathing apparatus in the positive mode with a full face-piece due to the likelihood of fumes, smoke, and hazardous component decomposition. Remove to fresh air and deploy artificial respiration if not breathing. Get medical attention.

SKIN CONTACT: Can cause irritation of exposed skin due to defatting of skin tissue. Handlers should always wear rubber gloves. Wash exposed skin vigorously with general soap and water. Get medical attention if skin irritation persists.

EYE CONTACT: Can cause irritation of exposed eye tissue. Handlers should always wear splash-proof goggles. Rinse eyes with cool flowing water for at least 15 minutes and get immediate medical attention.
SECTION 5. FIREFIGHTING MEASURES

FLASH POINT: 126°F Open Cup (52.2°C), Method = PMCC
LOWER FLAMMABLE LIMIT: % by volume not established
UPPER FLAMMABLE LIMIT: % by volume not established

Special Hazards and Procedures: This product poses no unusual fire fighting problems. It will burn if involved in a fire. Oxides of sulfur (SO2) will be given off while burning. Combustion may produce oxides of carbon and oxides of calcium. Water may be used to cool fire-exposed containers and structures but is not a suitable extinguishing media.

Protective Equipment: As in any fire, firefighters must be equipped to prevent breathing of vapors or products of combustion. Wear an approved self-contained breathing apparatus and protective clothing.

Extinguishing Media: Dry chemical, CO2 and foam are suitable. Water jets or any water-based fluid are not suitable. Closed containers may be cooled with water. Treat large fires as an oil fire. Oil will float on water and can cause fire to spread. Heat from fire can generate flammable vapor.

SECTION 6. ACCIDENTAL RELEASE PRECAUTIONS

PERSONAL: Wearing suitable protective equipment, eliminate sources of ignition and open nearby windows to ventilate the problem area.

ENVIRONMENTAL: Product has very low solubility in water. Prevent from entering sewer system, surface water or soil.

FOR SPILL CLEAN-UP: Shut off leak and dike up large spills. Absorb with an inert material such as sand, soil or vermiculite. Sweep up absorbent and dispose in accordance with regulatory requirements.

SECTION 7. PRODUCT HANDLING & STORAGE

HANDLING: This product is best stored in its original container. Steel or HDPE containers are recommended replacements and electrically bond and ground all containers and equipment. Avoid contact with eyes, skin and clothing. Avoid breathing vapors, aerosol and mists. Use with adequate ventilation and wash thoroughly after handling. Never use pressure to empty drums.

STORAGE: Full or partially-filled containers should always be kept upright and away from strong oxidizing agents. This product will pump down to 10°F [-12.2°C]. Nonetheless, it is recommended that full or partially-filled containers be stored in a cool dry place between 45° - 85°F [7.2° - 29.4°C]. Store in original container if possible, and keep all chemical containers away from direct sunlight and tightly closed when not in use.

SECTION 8. EXPOSURE CONTROL/PERSONAL PROTECTION

VENTILATION: None normally required. Use additional ventilation if needed to control vapor concentrations particularly if a mist is generated or fumes from hot material are present.

RESPIRATORY: None required if area adequately ventilated. Use appropriate respiratory protection if used in confined areas. If used in an application where a mist may be generated, observe a TWA/PEL of 5 mg/m³ (OSHA, ACGIH) for a mineral oil mist. Use a respirator with dual organic vapor/mist and particulates cartridge if vapor concentration exceeds permissible exposure limit.

SKIN PROTECTION: Use neoprene-type gloves and apron.

EYE PROTECTION: Wear chemical safety goggles or a full-plate face shield. Contact lenses should not be worn.

SECTION 10. STABILITY AND REACTIVITY

This product is stable and not subject to hazardous polymerization.

- **Hazardous Decomposition Products:** Oxides of carbon (carbon monoxide and carbon dioxide), and oxides of hydrogen (contaminated and hazardous water) are all formed from burning.
- **Incompatible materials:** Strong oxidizers such as hydrogen peroxide, oxidizing chlorine, and bromine compounds (e.g. chlorine bleach) and chromic acid should be avoided.
- **Conditions to avoid:** Extreme heat and sources of fire or ignition.

SECTION 11. TOXICOLOGICAL INFORMATION

- **ROUTES OF EXPOSURE:** Eye contact, skin contact, inhalation and ingestion.
- **ACUTE TOXICITY:** The handling procedures and safety precautions in this SDS should be followed to minimize employee exposure.
- **CHRONIC EFFECTS:** Can cause eye, skin and gastrointestinal irritation. Irritation of tissue, defatting of skin, gastrointestinal irritation, Kidney and Liver damage.
- **SYMPTOMS:** Irritation of exposed tissue and organs, blurriness of vision, dizziness, fainting, and lack of physical coordination.
- **LD50:** Not Established.
- **NTP/IARC/OSHA:** This product and none of its components are listed as a carcinogens, mutagens, or teratogens.

SECTION 12. ECOLOGICAL INFORMATION

No specific aquatic data is available. This product should be kept away from all bodies of water, and prevented from entering sewer streams. It may be necessary to extract soil where large spills have occurred. No specific Bioaccumulation data is available. No specific Terrain Migration data is available.

SECTION 13. DISPOSAL CONSIDERATIONS

- **WASTE DISPOSAL:** This product should be incinerated as a waste oil, at a certified and registered waste disposal site, in compliance with all federal, state and local regulations and requirements.
- **RCRA STATUS OF UNUSED PRODUCT:** Dispose of this product in permitted hazardous wastes sites. Keep this product away lakes, streams, rivers, ponds, sewer systems, and any other body of water.
SECTION 14. TRANSPORTATION INFORMATION

US DOT Classification:

NA 1993, Combustible Liquid, NOS (placard required on ground carriers): not regulated if shipped or transported in containers less than 450 liters (119 Gallons US).

- Proper Shipping Name: Proprietary mixture of petroleum derivatives
- Shipping Class: 65 (regardless of package or container size)
- Packing Group: III (regardless of package or container size)
- NMFC Rating: 155250-02

UN 1993, Flammable Liquid, NOS: If shipped in containers of 450 liters or more (120 Gallons US or more), by air or by sea.

- Proper Shipping Name: Petroleum Distillates, NOS
- Shipping Class: 65 (regardless of package or container size)
- Packing Group: III (regardless of package or container size)

IMDG Classification:

This product is not known to be a marine pollutant according to the International Marine Dangerous Goods Codes, however it can cause harm to aquatic life.

ICAO Classification:

- Proper Shipping Name: Petroleum Distillates, NOS
- Class: 3
- UN/NA ID #: NA 1993
- Packing Group: III

IBC Classification:

Guidance on transporting this product in bulk by ocean freight can be obtained from Annex II of Marpol 73/78 and the International Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk.

All Transportation Methods:

Keep packages and containers upright and tightly sealed at all time during transportation. Do not expose packages and containers to direct sunlight, extreme heat, or any source of ignition. All product should be transported in their original packaging and containers. Rubber, plastic or other lined containers should not be used.

SECTION 15. REGULATORY INFORMATION

There are no other national and/or regional statutes or information on this product, including OSHA, Department of Transportation, Environmental Protection Agency, Consumer Product Safety Commission, and Right-To-Know Act not previously addressed in this document.

Chemical Name CAS # NJ TS Number
None
SECTION 16. OTHER INFORMATION

This product has not been tested in long term, chronic exposure, therefore, the handling procedures and safety precautions in the SDS should be followed to minimize employee exposure.

Label Information for the United States: CAUTION: May cause skin and eye irritation. Do not swallow. Avoid eye and skin contact. Wash thoroughly after handling. Avoid contact with clothing. Wash clothing before reuse. Keep out of reach of children. Keep containers tightly closed when not in use. Avoid breathing mists or sprays of this product or its solutions.

EMPLOYER RESPONSIBILITY

Employers must ensure that these Material Safety Data Sheets are readily accessible and available to all their employees responsible for the storage, handling, and manipulation of this product. This can be done in many ways, such as organizing all chemicals SDS in freely available binders kept in areas where the chemicals are stored, or on computers the handling employees have access to without the inconvenience of leaving the work or storage area. We strongly recommend the binder method which keeps them available in the event of a power outage or other emergency inhibiting computer use. Employers may want to consider designating two persons (primary and backup) responsible for obtaining and maintaining SDS records. If the employer does not have a particular SDS for a chemical commodity, the employer or responsible designate should contact the chemical manufacturer to obtain one prior to product use.

DISCLAIMER

This brief provides a general overview of the Material Safety Data Sheet requirements as mandated by the Hazard Communication Standard 29 CFR 1910.1200(g) and Appendix D of 29 CFR 1910.1200. It does not alter or determine compliance responsibilities in the standard or the Occupational Safety and Health Act of 1970. Since interpretations and enforcement policy may change over time, the reader should consult current OSHA interpretations, decisions by the Occupational Safety and Heath Review Commission, and the courts for additional guidance on OSHA compliance requirement. Please note that states with OSHA-approved state plans may have additional requirements for chemical safety data sheets, outside of those outlined above. For more information on those standards, please visit: http://www.osha.gov/dcsp/osp/statestandards.html.
